New GottFlex Line of Servo Driven Flexographic Printers Launching at Pack Expo 2010 Booth #1719

Warminster, P.A., September 27, 2010 – Launching at Pack Expo Chicago is the new Gotttscho, GottFlex flexographic printer, utilizing rotary printing technology compatible with both intermittent and continuous motion blister machines, at speeds up to 40 CPM or 240 BPM respectively. A higher speed version is available.

Built in an extremely small footprint, this flexo-digital hybrid offers users the choice of the most economical way to produce every run: flexographic for copy text; digital for variable data and short runs or a combination of both.

Further cost reductions are achieved as pre-printed material is not required; the unit is suited for blank material and accommodates UV, water, and solvent-based inks. The GottFlex prints high quality graphics, human readable text, and barcodes on a variety of blister foils and materials.

Extremely accurate, the GottFlex is designed with imprint pressure adjustments for precise, easy on the fly adjustment. Featuring digital dial indicator adjustments in increments of .001 steps for adjusting the pressure of the ink roll, back up roll, and nip rolls for quick setups.

About Gotttscho

Gotttscho offers a complete line of printers & coders to support virtually any packaging configuration. From flexographic, digital, ink coders, thermal transfer and hot stamp, our versatile line of equipment and supplies will provide you with the right solution for your packaging requirements. Our printers can provide standard lot, expiration, copy text, graphics, and barcodes printed to ANSI and ISO standards. We support the pharmaceutical, medical, nutraceutical, food, beverage, consumer goods and specialty packaging industries and have over 10,000 installations worldwide.
